Memorandum

From: Steve Willis
To: Wayne Miller
Date: October 26, 2016
Subject: Site visit to observe well drilling activities at Former Williams AFB Site ST012.

Wayne:

This memo summarizes my visit to Site ST012 conducted today.

I arrived at the site at approximately 10:30 am. Drilling was just getting started on well UWBZ39 southwest of the above ground tank. I observed drilling of the upper 96-ft. of this boring and left the site at 2:30 pm. Drilling will continue, and AMEC field personnel expects to stop drilling before reaching groundwater at approximately 140-150-ft. I'll return tomorrow morning to observe the remainder of the drilling. PID readings were collected at 5-ft. intervals beginning at 25-ft. bgs, and no readings exceeded 1 ppm. I detected no hydrocarbon odors in any of the cuttings, which were silty sand from the ground surface to 96-ft.

I asked about the schedule for pulling the remaining educator pumps, and Pat Collins (AMEC) told me that was scheduled to start around November 15, based on driller availability. Additional AMEC crew was onsite collecting monthly perimeter groundwater samples.

Please contact me if you have comments or questions regarding this memo.

Thank you,
